PROBLEM STATEMENT TITLE

On-device threat, phishing and scam detection

THEME / TRACK

On-device AI Security

01 · THE TARGET

PROBLEM STATEMENT & UNDERSTANDING

PROBLEM STATEMENT

- Phishing links, payment traps and impersonation arrive across apps.
- People must decide before sharing secrets, installing apps or paying.
- Local-language readers need clear, accessible guidance.

OUR UNDERSTANDING

- Urgency and trusted branding can hide a dangerous request.
- Single-message checks can miss a scam spread across messages.
- Privacy, offline use and understandable evidence must work together.

02 · THE PLAN

PROPOSED SOLUTION

OUR IDEA

- Local AI + rules explain suspicious requests.
- Android app and Chrome extension fit everyday workflows.
- Scam Story Mode connects reviewed evidence.
- English / Hindi / Gujarati; larger text and guided setup.

FROM CONTENT TO A CLEAR NEXT STEP

Message / link / screenshot / QR

On-device models + security rules

Warning + evidence + next step

User-controlled. No cloud inference.

03 · THE ARSENAL

KEY FEATURES / FUNCTIONALITY

01**Android scanning**

Scan messages, links, screenshots, QR and files. Optional notification warnings and sound.

02**Floating assistant**

Shield → consent → crop → edit → scan. Paste or import an image for a private result.

03**Chrome protection**

Review text, links and pages. Optional site monitoring and risky click/form warnings.

04**Scam Story + accessible UX**

Connect messages; save encrypted cases. Three languages, larger text, tours and scam help.

04 · THE EXECUTION

HOW THE SOLUTION WILL WORK

05 · THE GEAR

TECHNOLOGY / TECH STACK

Layer	Technology	Why we chose it
Frontend	Kotlin / Compose; TypeScript	Native app + browser interface
Runtime	Android + Chrome MV3	On-device inference; no cloud backend
Storage	Room; AES-GCM; Chrome local	History, encrypted cases, reports
AI / recognition	Logistic model; LiteRT; OCR	Offline text, URL, image checks
Hosting	Public static demo website	Shareable jury fixtures and guide
Build / testing	Gradle; Python; Playwright	Reproducible builds and validation

Bundled models and OCR/QR assets; no cloud inference API.

06 · INSIDE THE MINT

CURRENT PROGRESS / WORK DONE

COMPLETED

- Android 1.9.0 + Chrome 1.1.0.
- 593 Android unit + 73 offline checks passed.
- 431 Chrome unit + 43 browser checks passed.

IN PROGRESS

- S24/A36 rehearsal and accessibility review.
- Independent multilingual fraud evaluation.
- Publisher signing and store submission.

ACTUAL PRODUCT CAPTURES

Android warning

High-risk content

Do not share passwords, PINs or one-time codes. Contact the organization through its official app.

Chrome warning

High-risk evidence

09:05 AM · 0 ms

Stop and verify independently. Avoid sharing

07 · THE GETAWAY

FUTURE PLAN / NEXT STEPS

PHASE 1**DURING THE HACKATHON**

- Rehearse app + extension on S24/A36; verify sound and consent.
- Show scam/control pairs, connected evidence and offline scans.

PHASE 2**RIGHT AFTER**

- Collect fresh labeled EN/HI/GU examples; evaluate by scam category.
- Run a consented pilot; refine warnings and add story playbooks.

PHASE 3**LONG-TERM VISION**

- Signed model updates, wider device support and store releases.
- Explore bank/education partnerships through private pilots.
